

First we made a plan of action to identify areas of our school that needed some work done on them. We decided our Cross Garden needed some tidying.

We found that some of our gardens were really over grown and needed some weeding... but some of our gardens had nothing in them at all!

It was time to take action! We started by getting the gardens ready for planting. In each of our classes we thought about what sorts of vegetables we might like to grow...

Check out our awesome produce! Now we are clearing out the garden and getting ready for new planting... hmm what should we plant?

St Teresa's Enviro- Journey

Look at our strawberry patch!!

We really enjoyed trying some of our produce... the sprouts grew really fast! We then got to weeding and made sure the weeds went straight to the compost bin.

We started growing seeds in our classroom. It was really exciting to see how fast the peas and beans grew! Room 1 did a really good job of planting our seedlings in the garden. We found some interesting squirmly things when we were planting...

We had to get some experts in for some of the big jobs... we had a working bee to help put up our shade house, weed around our orchard and put in some new bark.
